

To execute the tests, follow these steps:

To execute the tests, follow these steps:

1. Install Python and pip on your machine if they are not already installed.
2. Install Robot Framework and SeleniumLibrary using pip:
`pip install robotframework`
`pip install robotframework-seleniumlibrary`
3. Download the appropriate web driver for your browser and add it to your system's PATH variable.
4. Open a command line interface in the directory containing the .robot file.
5. You can run specific tests by specifying the name of the test suite file and the name of the test case:
`robot <filename>.robot`
For example, to run the "Check if page title exists" test, use the following command:
`robot check_title.robot`
