Task 1 Answers

How would you further develop this test:
1. What kind of checks would you add to the current tests?
2. What are the next tests you would recommend implementing?
3. Does the profile page have non-functional properties? How would you test these properties?

Answers:

1. Improve the current tests by adding negative scenarios, such as verifying that an error message is displayed when incorrect user input is provided. Additionally, it could be beneficial to add performance testing to ensure that the page loads quickly and efficiently.

2. One potential test to add would be to check that the search bar functionality is working properly, allowing users to find specific reviews based on keywords or phrases. Another test could involve verifying that users are able to leave reviews and ratings successfully.

3. Yes, the profile page likely has non-functional properties that can be tested. Some potential areas to test include accessibility, security, and usability. For accessibility, it could be useful to perform automated or manual testing with tools like screen readers to ensure that the page can be used by individuals with disabilities. For security, it would be important to test for vulnerabilities such as SQL injection or cross-site scripting. For usability, user testing could be conducted to gather feedback on the overall user experience and identify areas for improvement.
